### Mission Uganda – A Huge Blessing!

In December, 2016, Bill Farrar and Nancy Harbron traveled to Uganda, East Africa to deploy two water purifier systems. One purifier was installed at the Kampala Church of Christ where mothers had been praying for many years to have safe water for their children. When the children came to church, they did not have safe drinking water which limited their time to be able to stay. The church's city water had to be boiled to be safe. The coal needed, to boil the water, was too expensive to provide water for all of the church members and visitors every day. With the new Fountains of Hope system, access to safe water requires only a quarter cup of readily available and inexpensive salt, a twelve-volt battery, and water. Now members and guests can stay longer, enjoying worship and fellowship along with a safe cup of drinking water.

During the same trip, a second system was installed at the Mityana Church of Christ, a very rural area outside of Kampala. Church members and guests from the Muslim community are now able to enjoy and share safe water while visiting with one another. The new safe water is a symbol of the True Living Water, and is an avenue to tell others about Jesus. As soon as the water faucet was opened, the people came running for a drink, and children came with their water jugs to fill and take home.

Please continue praying for the numerous opportunities to provide safe water in Uganda and share the Living Water!
